## Identifying and Treating Child Language Disorders **WITHIN** a Child's Dialect in Dialectally Diverse Communities

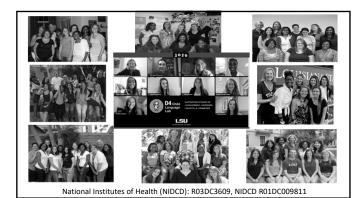

SUPPORTING STUDIES OF DEVELOPMENT, DISORDERS, DIALECTS, & DISPARITIES

LSU

Department of Linguistics

### Terminology

### **Dialects by Category**

Mainstream Nonmainstream

Dialects by Name
General American English (GAE)
African American English (AAE)
Southern White English – rural (SWE)
Cajun/Creole English (CE)
Spanish-influenced English (SE)
AAE with Gullah/Geechee Influence (AAE-Gullah/Geechee)

AIECLES DY PIACE
Baton Rouge, New Orleans, Pierre Part, River Parishes
Philadelphia, Pittsburgh (Pittsburghese), Rural Pennsylvania (Pennsyltucky)

Oetting, 2020; https://leader.pubs.asha.org/do/10.1044/leader.FMP.25112020.12/full/

### Terminology

Schools: Speech and Language Impaired

### Research:

Specific Language Impairment Developmental Language Disorder Primary Language Impairment

Today's Talk:

Language Impaired (LI)
Typically Developing (TD)

### ASHA (1983)

No dialectal variety of English is a disorder or a pathological form of speech or language

Assessment: Distinguish dialect from disorder Treatment: Treat only "true errors" not dialect differences

Dialect vs.

Disorders

2-Box Model

https://www.asha.org/policy/ps1983-00115/

### Dialect vs. Disorder

Child's Productions		Dialect	Disorder
Zero copula be Zero third person	He happy He walk	x x	
Zero plural s	Two shoe	x	
Multiple negation	I don't want none	X	
Pronoun appositive	My sister, she	х	
Zero articles	I see shoe		X
Zero Infinitive to	I want go shopping	x	
Zero preposition to	I took Pam the store		X
Dialect specific past tense	drunk/drank	Х	
Dialect specific words	fixin, sposta, hafta	x	

Test and treat productions that cannot be tied to a child's  $\mbox{\tt dialect}$ 

$\sim$	l	$\sim$	otes
( )T	ner	( )	OTES

Test results are invalid if the test taker comes from a background other than that of the test's normative sample (ASHA, 1983).

Methods used for collecting language data and the ways in which we approach their scoring and analysis should not be rooted in the majority culture (Craig, 1996).

Scoring systems that do not provide equal treatment to alternative language expressions lack validity (Vaughn-Cooke, 1983; Nelson, 1991).

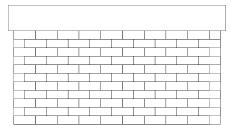

### Snake Metaphor

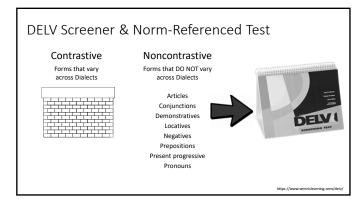

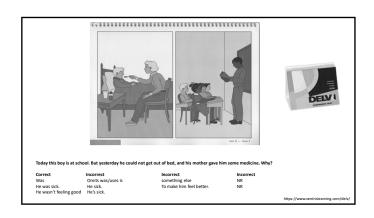

Red against Yellow can kill a fellow; Red touching Black, safe for Jack

## Wall Metaphor

New Framework: Diagr	nostic Conundrum		] _

Dialect vs. Disorder Diagnostic Conundrum

Disorder within Dialects

How does dialect variation differ from LI?

How does LI manifest in various nonmainstream dialects of English?

How do same dialect-speaking children with and without LI differ from each other?

r	_
	) r

73 African American children, aged 4-5 years, Head Start/Public PreK

Diagnostic Evaluation of Language Variation: Screening Test: Fail = 52%

Fluharty Preschool Speech and Language Screening Test-2: Fail = 56-75%

Washington and Craig Experimental Screener: Fail = 48%

Wynn & Oetting, under review; see also work by Cathy Qi

### Under-Identification / Limited Access

Birth to 5 years; 9,600 children. Rate of SLP services per parent report at 24, 48, 60 mo. African American 45 – 60% less likely to receive services. Hispanic also less likely but other language accounted for differences.

 $K-8^{th}$  grade; 20,100 children. SLP services in schools. African American 57% less likely to receive services. Hispanic 33% less likely.

These studies control for SES and many other variables; Morgan et al. (2015; 2016)

### How do we learn about our children's dialects?

Cute, fun to read

Great for celebrating dialects

Not accurate for clinical practice

# Assessment in Speech-Language Pathology A Resource Manual Sind Edition Kenneth G. Shipley - Julie G. McAfee

merican Er	nglish	
Table 2-3 Characteristics of Afr	ican American English Morpho	logy and Syntax
AAL Feature/Characteristic	Mainstream American English	Sample AAE Utterance
Omission of noun possessive	That's the woman's car. It's John's pencil.	That the woman car. It John pencil.
Omission of noun plural	He has 2 boxes of apples. She gives me 5 cents.	He got 2 box of apple. She give me 5 cent.
Omission of third person singular present tense marker	She walks to school. The man works in his yard.	She walk to school. The man work in his yar
Omission of "to be" forms such as "is, are"	She is a nice lady. They are going to a movie.	She a nice lady. They going to a movie.
Present tense "is" may be used regardless of person/number.	They are having fun. You are a smart man.	They is having fun. You is a smart man.
Utterances with "to be" may not show person number agreement with past and present forms.	You are playing ball. They are having a picnic.	You is playing ball. They is having a picnic.
Present tense forms of auxiliary "have" are omitted.	I have been here for 2 hours. He has done it again.	I been here for 2 hours. He done it again.
Past tense endings may be omitted.	He lived in California. She cracked the nut.	He live in California. She crack the nut.
Past "was" may be used regardless of number and person.	They were shopping. You were helping me.	They was shopping. You was helping me.

### Spanish-Influenced English Table 2-10 Language Differences Commonly Observed Among Spanish Speakers Language Characteristics Sample English Utterances 1. Adjective comes after noun. The house green. The girl book is . . . Juan hat is red. 2. 's is often omitted in plurals and possessives. 3. Past tense -ed is often omitted. We walk yesterday. 4. Double negatives are required. I don't have no more. 5. Superiority is demonstrated by using mas. This cake is more big. The adverb often follows the verb. He drives very fast his motorcycle. Source: From Multicultural Students with Special Language Needs 2nd ed. (p. 84), by C. Roseberry-McKibbin, 2002, Oceanside, CA: Academic Communication Associates. Reprinted with permission.

English
Influenced
by Another Language

Language Characteristics	Sample English Utterances
Omission of plurals	Here are 2 piece of toast. I got 5 finger on each hand.
Omission of copula	He going home now. They eating.
Omission of possessive	I have Phuong pencil. Mom food is cold.
Omission of past tense morpheme	We cook dinner yesterday. Last night she walk home.
Past tense double marking	He didn't went by himself.
Double negative	They don't have no books.
Subject-verb-object relationship differences/omissions	I messed up it. He like.
Misordering of interrogatives	You are going now?
Misuse or omission of prepositions	She is in home. He goes to school 8:00.
Misuse of pronouns	She husband is coming. She said her wife is here.
Omission and/or overgeneralization of articles	Boy is sick. He went the home.
Incorrect use of comparatives	This book is gooder than that book
Omission of conjunctions	You I going to the beach.
Omission, lack of inflection on auxiliary "do"	She not take it. He do not have enough.
Omission, lack of inflection on forms of "have"	She have no money.  We been the store.

### Limitations of Dialect Lists

They only describe a few salient, high stigmatized forms. The dialects listed are far more complicated than described.

They lack contextual information.

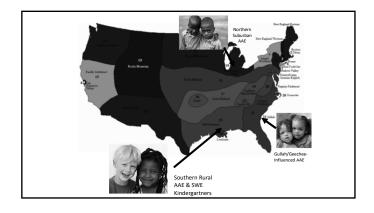

They lack frequency information.

They lack information about how children with and without LI differ on the forms within the dialect list.

### Collect Data!

Illustration of American English Dialect Map (Robert Delany, 2000) http://robertspage.com/dialects.html

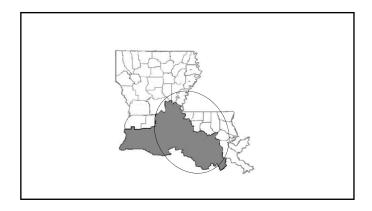

### Louisiana and the Acadiana Triangle

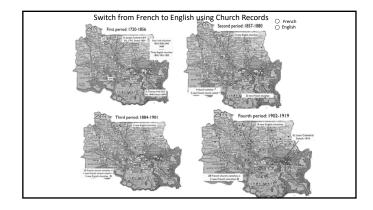

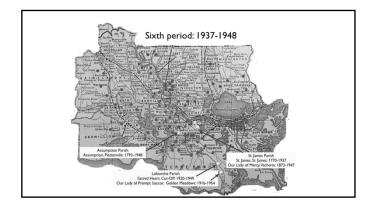

700s: 3,500 French-speaking cadie from Nova Scotia

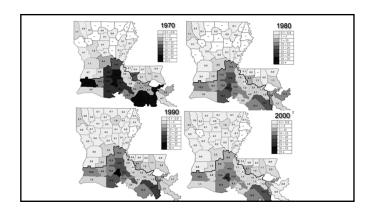

300s: Influx of French, Spanish, sh, Scottish, German, Free eople of Color, African, Native merican.

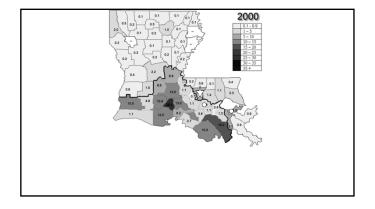

900s: Major civil/racial changes ith shifts in identity (white vs. ack)

Same forms are frequently produced in other nonmainstream dialects of AAE		pronoun		
Same forms are frequently produced in other nonmainstream dialects of AAE				
Same forms are frequently produced in other nonmainstream dialects of AAE				
	S	Same forms are frequently p	roduced in other nonmainst	ream dialects of AAE

Although nonmainstream dialects share many of	the
same forms, they differ in three ways:	

- 1. Rate of use
- 2. Constraints on use
- 3. Function of use

# 1. Dialects Differ in Rate of Nonmainstream Forms Percent of Utterances with a Nonmainstream Form AAE SWE Mean 29% 12% Range 10 - 52% 3 - 35% 97% accuracy in classifying AAE and SWE speakers by just using percent at which each of the 35 forms were produced by the children.

### 2. Dialects Differ in their Constraints on Form Use

An Example with Forms of BE

Person, Number, & Tense: am, is, are, was, were

Contractibility: Contractible (Jan's two) vs. Uncontractible (Chris is two)

Grammatical Function: Copula (Jaya is tall) vs. Auxiliary (Jaya is running)

### Constraints Encourage / Discourage Overt Forms

Person	first person > third person > second
Number	past > present
Tense	I'm happy > He's happy > You're happy
	She was happy > She is happy
Contractibility	uncontractible > contractible
	Jess is happy > Tom's happy
Grammatical	copula > auxiliary
Function	She is happy > She is walking

### A study of 62 Children, aged 4-6 years: Percent of Overt Forms

	SWE	AAF
Person/Number/Tense		
Am	96	94
Is	95	59
Are	77	27
Was/Were	99	96
Contractibility		
Contractible	93	57
Uncontractible	94	77
Grammatical Function		
Copula	96	70
Auxiliary	87	53

RED indicates that the constraint was significant for the dialect.

AAE = 3 constraints SWE = 2 constraints

D... O.W.- - 8 Maland 2004

### Another study of 38 children, aged 4-6 years

	SWE	AAE	AAE with Gullah/Geechee
Person/Number/Tense			
Am	96	94	69
Is	95	59	76
Are	77	27	48
Was/were	99	96	88
Contractibility			
Contractible	93	57	68
Uncontractible	94	77	88
Grammatical Function			
Copula	96	70	82
Auxiliary	87	53	73

AAE with Gullah/Geechee influence is affected by the same constraints as AAE but not in the

rry & Catting 2017

Complicating action	84%
Result	2%
Evaluation	4%
Coda	4%

### Use tied to Narrative Development

1	Descriptive sequence Heaps; clauses in any order.
2	Action sequence Clauses in chronological order, but not causative in nature.
3	Reactive sequence preschool Clauses ordered chronologically and causatively.
4	Abbreviated episode 6 years Story states character intentions but not a clear plan.
5	Incomplete episode, complete episode, multiple episode 7-8 years Episode = initiating event, explicit character intentions, consequences.

Stein & Glenn's (1979) Story Structure Leve

 $\ensuremath{\mathsf{AAE}}\xspace$  -speaking children with stronger narrative skills produced more Preterite Had forms.

### Summary

A disorder within dialects framework allows you to:

- 1. Test and treat a child's entire language system.
- 2. Learn about similarities and differences between nonmainstream dialects.

Nonmainstream dialects share many forms but differ in: frequency of use contexts of use functions of use

3. Discover how children with LI differ from their TD peers in their dialects.

In both AAE and SWE (and GAE and likely other dialects), children with LI struggle to produce overt forms of verb morphology at the same percentages as their TD peers. They are less productive with their grammars.
